JOB RECRUITMENT PORTAL

ACADEMIC TEAM PROJECT – 2026–2027

SASI INSTITUTE OF TECHNOLOGY AND ENGINEERING
Department of Information Technology

---

1. PROJECT DETAILS

Project Title: Job Recruitment Portal

Project Description:

The Job Recruitment Portal is a web-based application designed to connect job seekers and recruiters through a single platform. Candidates can register, search for job opportunities, view job details, and apply for suitable positions. Recruiters can post job vacancies, manage job details, view candidate applications, and update application statuses.

2. OBJECTIVES OF THE PROJECT

- To provide an online platform for job seekers and recruiters.
- To make job searching and application processes easier.
- To allow recruiters to manage job postings.
- To maintain candidate and application details.
- To reduce manual work in the recruitment process.

3. TEAM MEMBERS

S. No.	Name	Roll Number
1	S.Y.D.Surendra Reddy	24K61A1299
2	R.Rajasekhar	24K61A1298
3	S.Lavanya	24K61A12A0
4	S.P.N.Sandhya Siri Sree	24K61A12A1

4. TECHNOLOGIES USED

1. HTML
2. CSS
3. JavaScript
4. React JS
5. React Router
6. JSON Server

INTRODUCTION

1. INTRODUCTION

The Job Recruitment Portal is a web-based application developed using React JS to simplify and improve the recruitment process. The main purpose of this project is to provide a common platform for candidates and recruiters to interact with each other. It helps candidates search for suitable job opportunities and apply for jobs, while recruiters can publish job vacancies and manage applications received from candidates.

In the traditional recruitment process, candidates often need to visit multiple websites or organizations to find suitable job opportunities. Similarly, recruiters may find it difficult to manage job postings and applications manually. The Job Recruitment Portal aims to reduce these difficulties by providing an organized and user-friendly online platform.

The application is designed with two main types of users: **Candidates and Recruiters**. Candidates can search for jobs based on job title, location, and experience. They can view complete job descriptions and apply for suitable positions. Recruiters can add new job postings, edit existing job details, delete job postings, and view applications received for their jobs.

2. PURPOSE OF THE PROJECT

The primary purpose of the Job Recruitment Portal is to make the job search and recruitment process easier, faster, and more organized. It provides a centralized platform where candidates can explore available opportunities and recruiters can manage their recruitment activities.

The system helps candidates identify job opportunities according to their qualifications, skills, location, and experience. It also allows recruiters to maintain job information and monitor the applications submitted by candidates.

By using this portal, the recruitment process becomes more systematic and reduces the effort involved in handling job information and applications manually.

3. OVERVIEW OF THE SYSTEM

The Job Recruitment Portal is developed using React JS with functional components and React Hooks. React Router is used to navigate between different pages of the application. JSON Server is used as the backend to store and manage application data.

The system maintains three main data collections:

1. **Jobs:** Stores job information such as job title, company name, location, experience requirements, salary, job type, description, and required skills.
2. **Candidates:** Stores candidate details such as name, email, experience, skills, and resume link.
3. **Applications:** Stores application details such as job ID, candidate ID, cover note, application status, and applied date.

The application uses API requests to communicate with the JSON Server. These requests help perform operations such as retrieving job details, registering candidates, submitting applications, updating job information, and changing application statuses.

4. MAIN USERS OF THE SYSTEM

4.1 Candidates

Candidates are the users who search and apply for job opportunities through the portal. They can perform the following activities:

- Search for jobs using job title and location.
- Filter jobs based on experience and other available criteria.
- View complete job descriptions and required skills.
- Register and maintain their profile information.
- Apply for suitable job opportunities.
- View their submitted applications and application status.

4.2 Recruiters

Recruiters are responsible for managing job postings and reviewing applications. They can perform the following activities:

- Log in to the recruiter section.
- Add new job vacancies.
- Edit existing job details.
- Delete job postings.
- View jobs posted by them.
- View applications received for each job.
- Update application status as Applied, Shortlisted, or Rejected.

5. TECHNOLOGIES USED

The project uses the following technologies:

- **React JS:** Used to develop the user interface using reusable components.
- **React Router:** Used for navigation between application pages.
- **JavaScript:** Used to implement application logic and user interactions.
- **HTML and CSS:** Used to structure and style the web pages.
- **JSON Server:** Used as a simple backend to store and manage data.
- **Fetch API / Axios:** Used to communicate with the backend through HTTP requests.
- **Context API:** Used to manage authentication information and user roles.

6. FUNCTIONAL OVERVIEW

The Job Recruitment Portal consists of different pages that support candidate and recruiter activities.

The home page acts as the main entry point for all users. It provides a job search facility and displays some of the latest job opportunities. The jobs page displays the available job listings and provides search and filtering options. The job details page displays complete information about a selected job and provides an option to apply.

The login and registration pages allow users to access the portal based on their roles. Candidates can access their profile and application details, whereas recruiters can access their dashboard and manage job postings.

The recruiter dashboard displays the recruiter's job postings and provides options to add, edit, delete, and view applicants. The job application page displays the candidates who have applied for a particular job and allows the recruiter to update their application status.

7. KEY FEATURES OF THE PROJECT

7.1 Job Search and Filtering

Candidates can search for available jobs using job title, location, and experience. This feature helps users find relevant job opportunities without checking every job posting individually.

7.2 Job Details

The portal provides detailed information about each job, including company name, location, experience requirements, salary, job type, description, and required skills.

7.3 Candidate Registration and Profile Management

Candidates can register on the portal and maintain their personal and professional details. Their profile includes information such as name, email, experience, skills, and resume link.

7.4 Job Application Management

Candidates can apply for suitable jobs through the application process. The system checks whether the candidate has already applied for the same job to avoid duplicate applications.

7.5 Recruiter Dashboard

The recruiter dashboard provides a centralized place to manage job postings. Recruiters can view their jobs, add new vacancies, edit existing details, and delete unwanted postings.

7.6 Application Status Management

Recruiters can view the applications received for their job postings and update the status of each application. The available statuses include Applied, Shortlisted, and Rejected. Candidates can view the status of their submitted applications.

8. Components and Pages Used in the Project

1. Recruiter Components and Pages

1.1 Recruiter Pages

1. RecruiterDashboard.jsx

2. ManageJobs.jsx

3. AddJob.jsx :

4. EditJob.jsx :

5. Applications.jsx:

1.2 Recruiter Components

1. JobForm.jsx:

2. ApplicantsTable.jsx:

3. RecruiterJobTable.jsx:

4. StatusCard.jsx:

5. StatusDropdown.jsx:

6. ConfirmDialog.jsx:

2. Candidate Components and Pages

These pages and features are designed specifically for candidates who are searching and applying for jobs.

2.1 Candidate Pages

1. MyApplications.jsx

2. CandidateRegister.jsx

2.2 Candidate Components and Sub-Features

1. Candidate Application Form

3. Common Components and Pages

These pages and components are shared by candidates, recruiters, and public visitors.

3.1 Common Pages

1. Home.jsx .

2. Jobs.jsx (/jobs):

3. JobDetails.jsx (/jobs/:jobId):

4. Login.jsx (/login):

3.2 Common Components

1. Navbar.jsx:

2. Footer.jsx:.

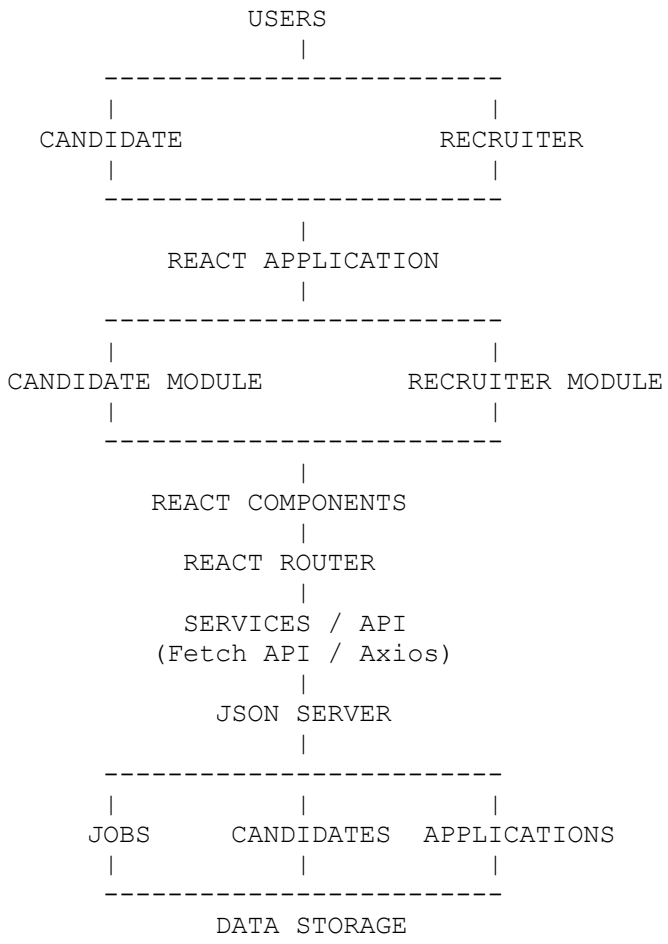

3. JobCard.jsx:

4. ProtectedRoute.jsx:

ARCHITECTURE OF THE JOB RECRUITMENT PORTAL

1. SYSTEM ARCHITECTURE

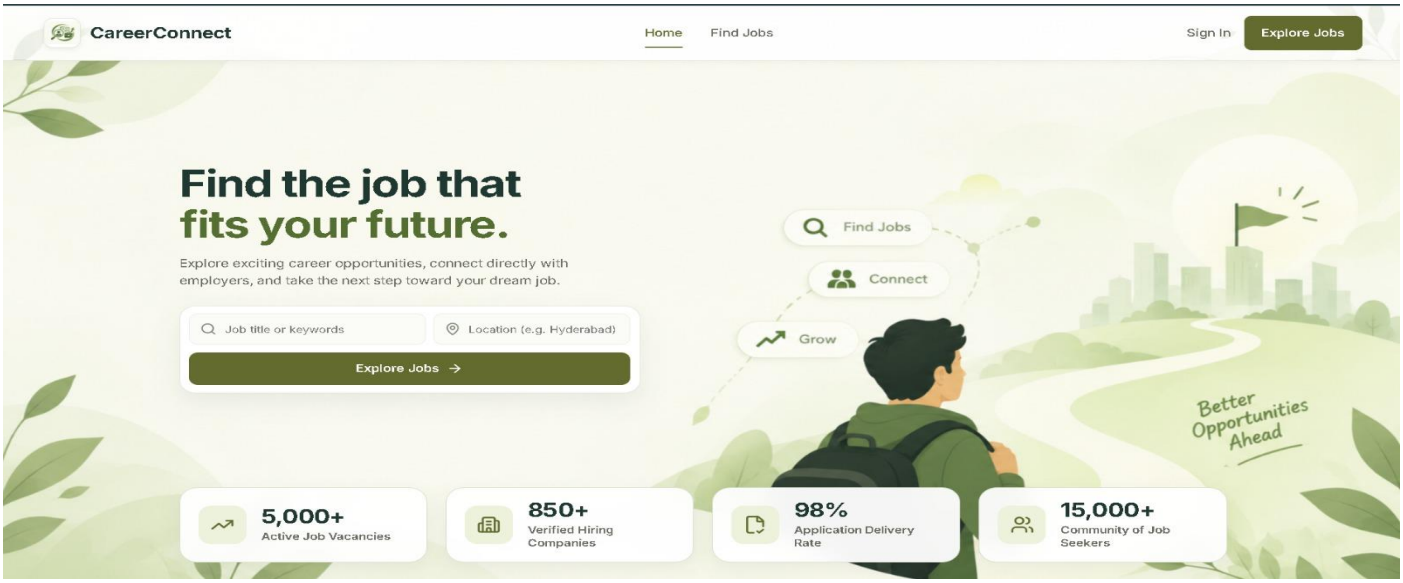

The Job Recruitment Portal follows a component-based architecture using React JS for the frontend and JSON Server for backend data management.

EXPLANATION OF PROJECT SCREENSHOTS

The following explanation is based on the 12 pages in your uploaded Job Recruitment Portal – Screens PDF. It describes each screenshot in a formal project-report format.

1. HOME PAGE

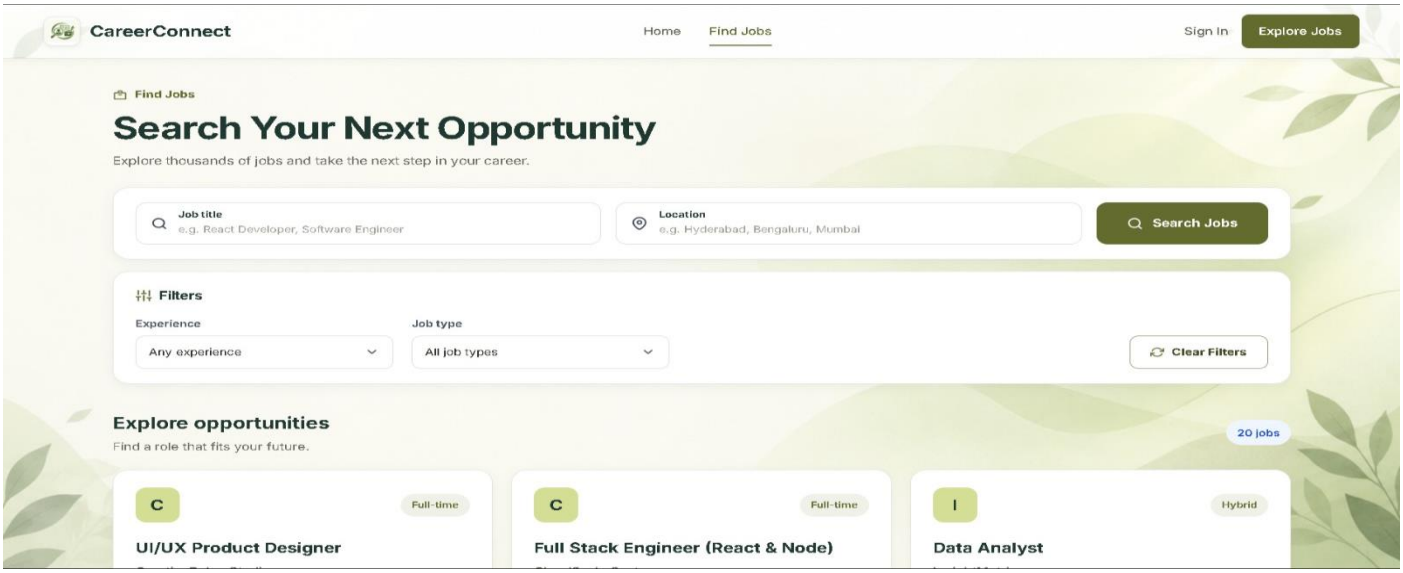

The Home Page is the main entry point of the Job Recruitment Portal. It includes navigation links, a job search section for title, location, and experience, and a Latest Jobs section displaying job details such as company, salary, and experience requirements with a View Details option.

Main purpose: To help users quickly search for available job opportunities.

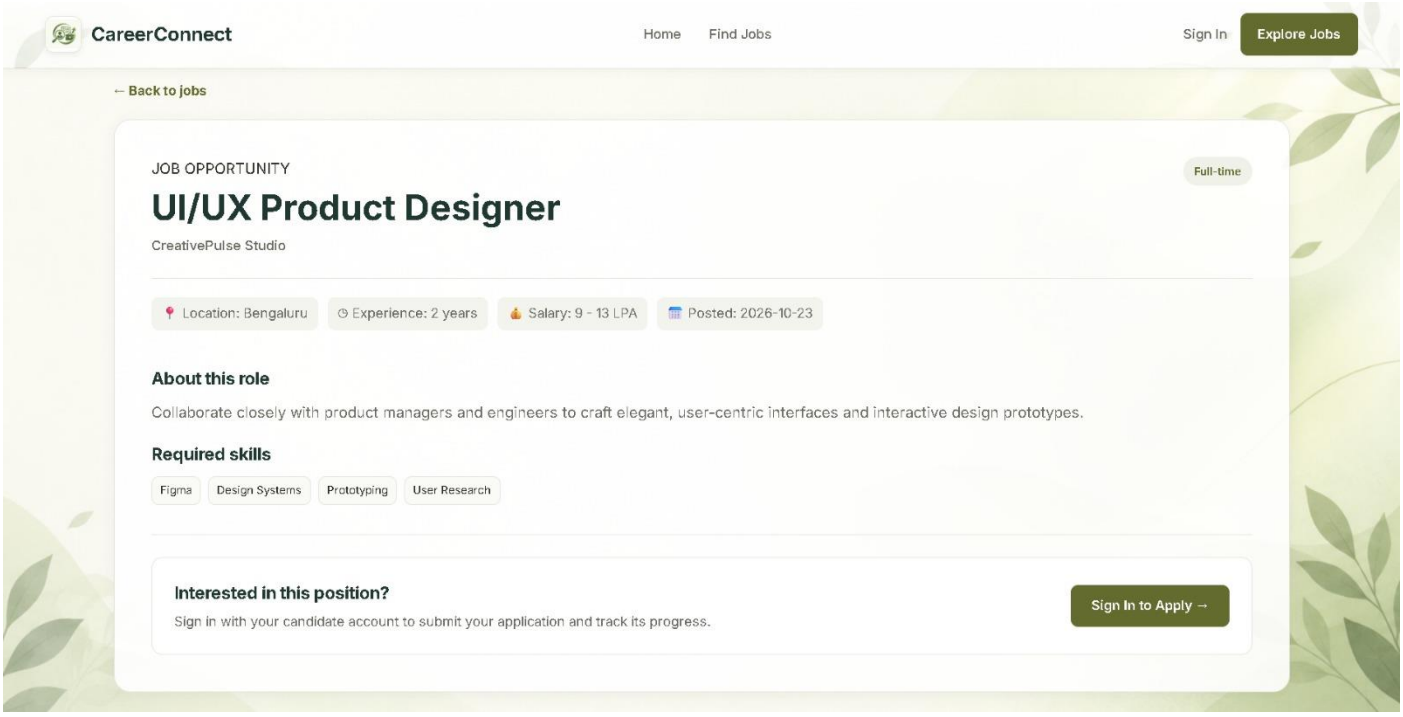

2. JOBS PAGE

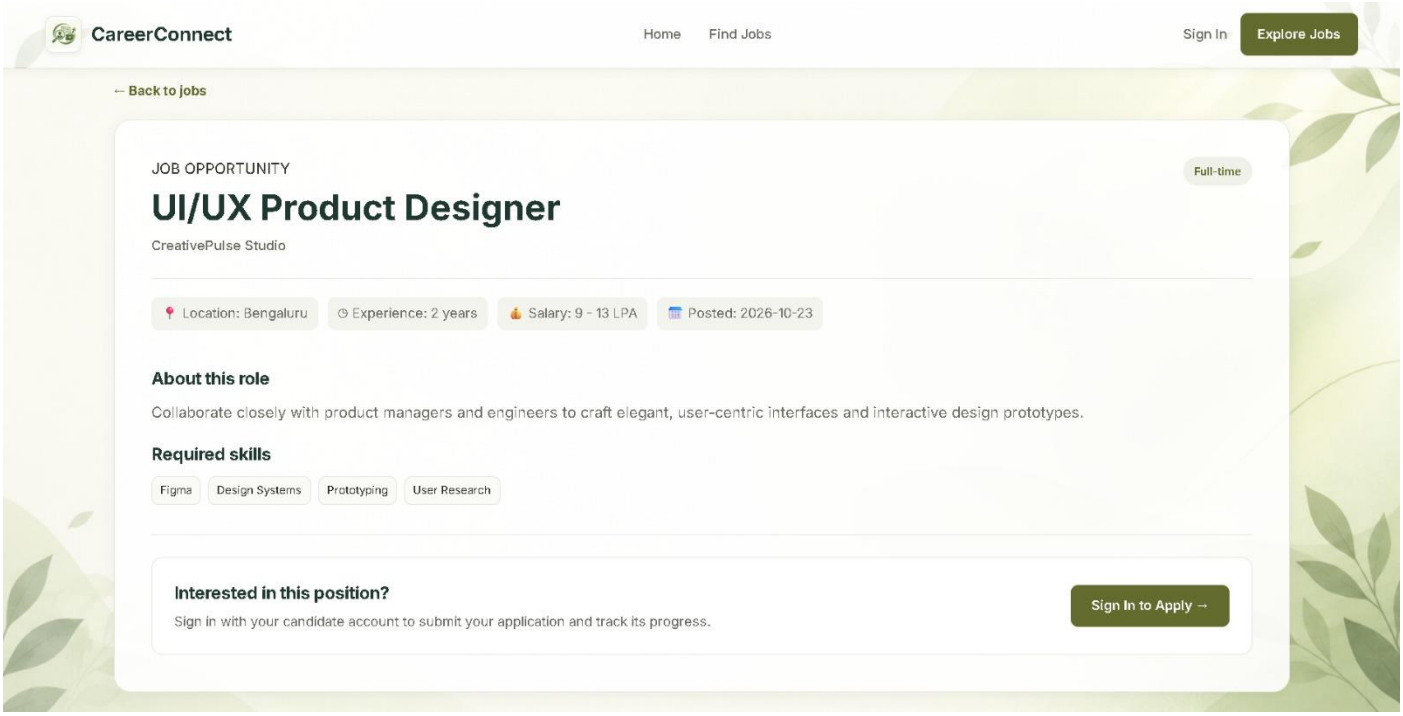

The Jobs Page displays available job vacancies and helps candidates find suitable opportunities using filters such as experience and job type. Each listing shows the job title, company, location, experience, salary, and View Details option. Pagination allows users to navigate through multiple job listings.

Main purpose: To display job opportunities and allow candidates to search and filter available jobs.

4. JOB DETAILS AND APPLICATION PAGE

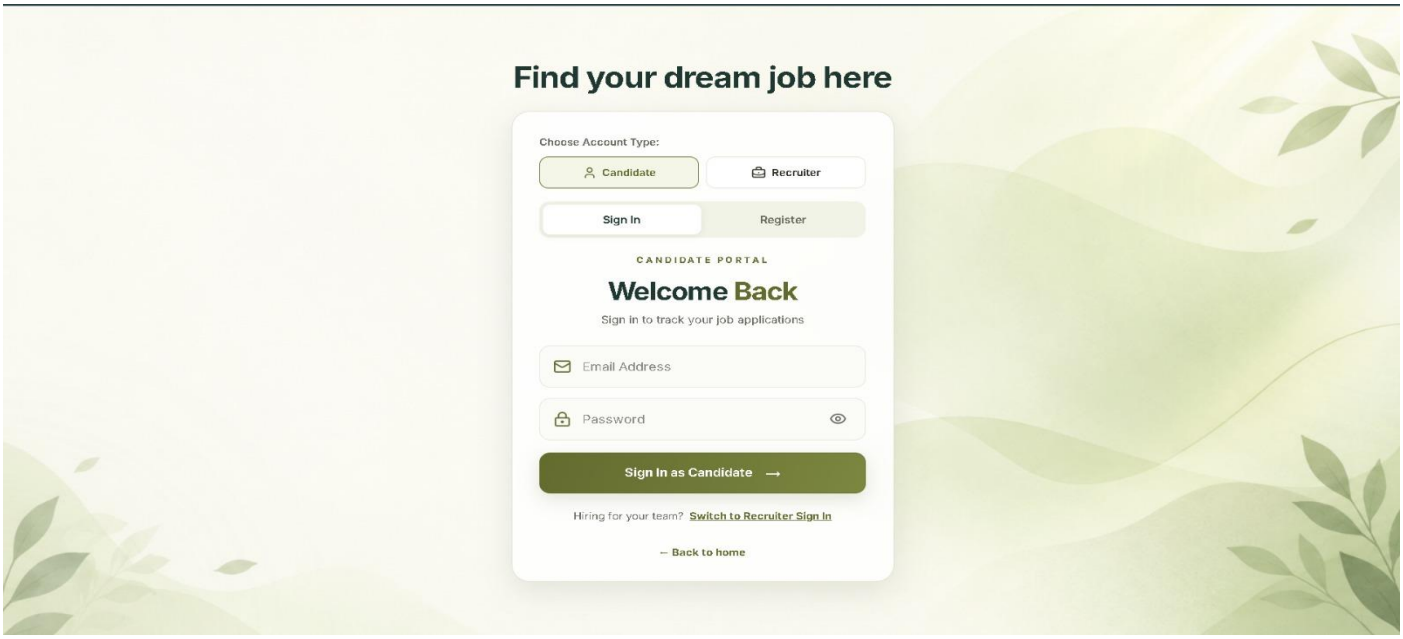

This page displays the complete details of a selected job. It includes the job title, company name, location, experience requirements, salary, job type, required skills, and job description.

The Apply Now option allows candidates to apply for the selected job. An application form is displayed with fields for the resume link and cover note.

The candidate can submit the application using the Submit Application button or cancel the process using the Cancel button.

Main purpose: To provide complete job information and allow candidates to submit job applications.

5.LOGIN PAGE

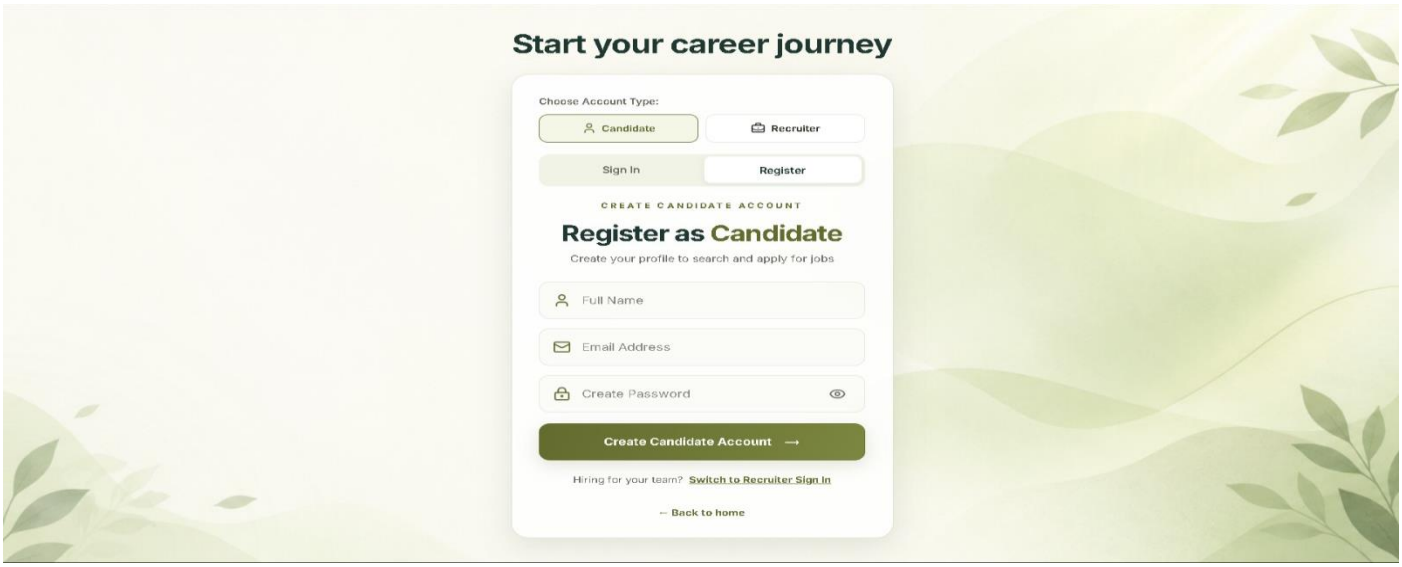

The Login Page allows registered users to access the Job Recruitment Portal. It contains two input fields: Email and Password.

Users must enter their registered email address and password to log in. After successful login, they can access the features available for their respective roles.

The page also provides a Create an Account link for new users who want to register.

Main purpose: To authenticate registered candidates and recruiters before accessing the portal.

6. REGISTRATION PAGE

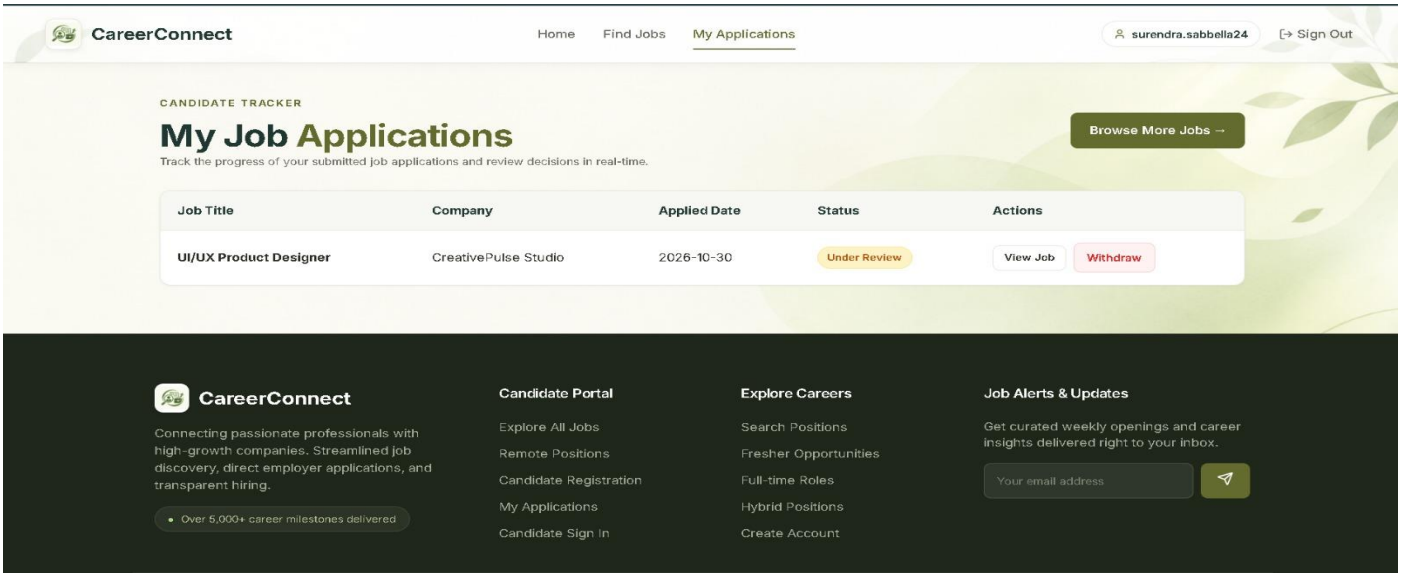

The Registration Page allows new users to create an account on the portal. It contains fields for Name, Email, Password, and Role.

The Role field allows users to select whether they want to register as a Candidate or Recruiter. After entering the required information, users can click the Create Account button.

Main purpose: To register new users and identify their roles in the system..

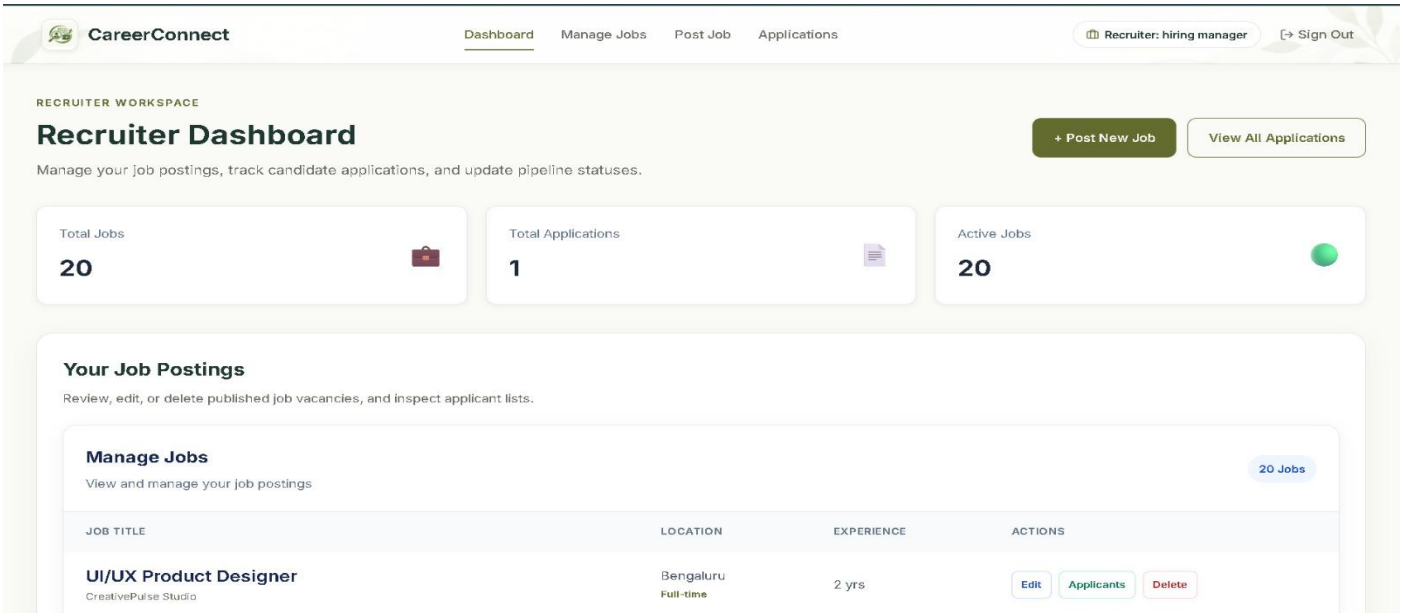

7. MY APPLICATIONS PAGE

. The My Applications Page displays jobs applied for by a candidate, including the job title, company name, applied date, and application status. The available statuses are Applied, Shortlisted, and Rejected, helping candidates track their application progress.

Main purpose: To allow candidates to view and track the status of their submitted job applications.

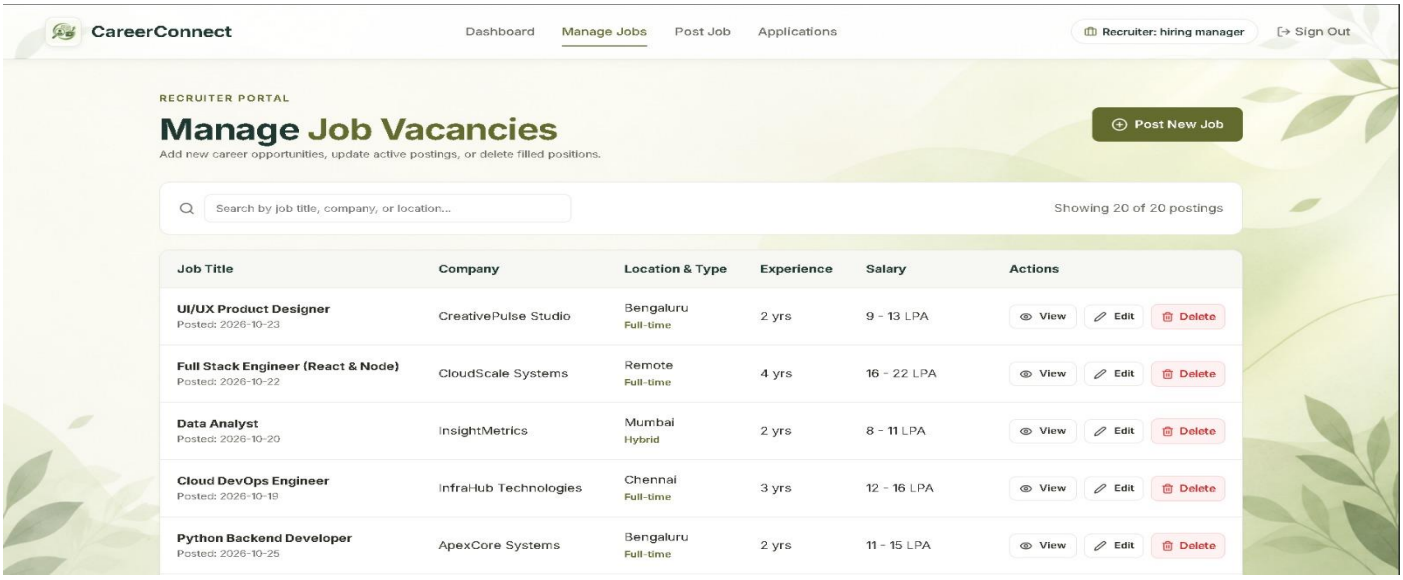

8. RECRUITER DASHBOARD

The Recruiter Dashboard helps recruiters manage job postings and monitor applications. It displays Total Jobs and Total Applications, along with a list of job details. Recruiters can add, edit, and delete job postings and view applicants for each job.

Main purpose: To provide recruiters with a centralized interface for managing job vacancies and applications.

9. ADD / EDIT JOB PAGE

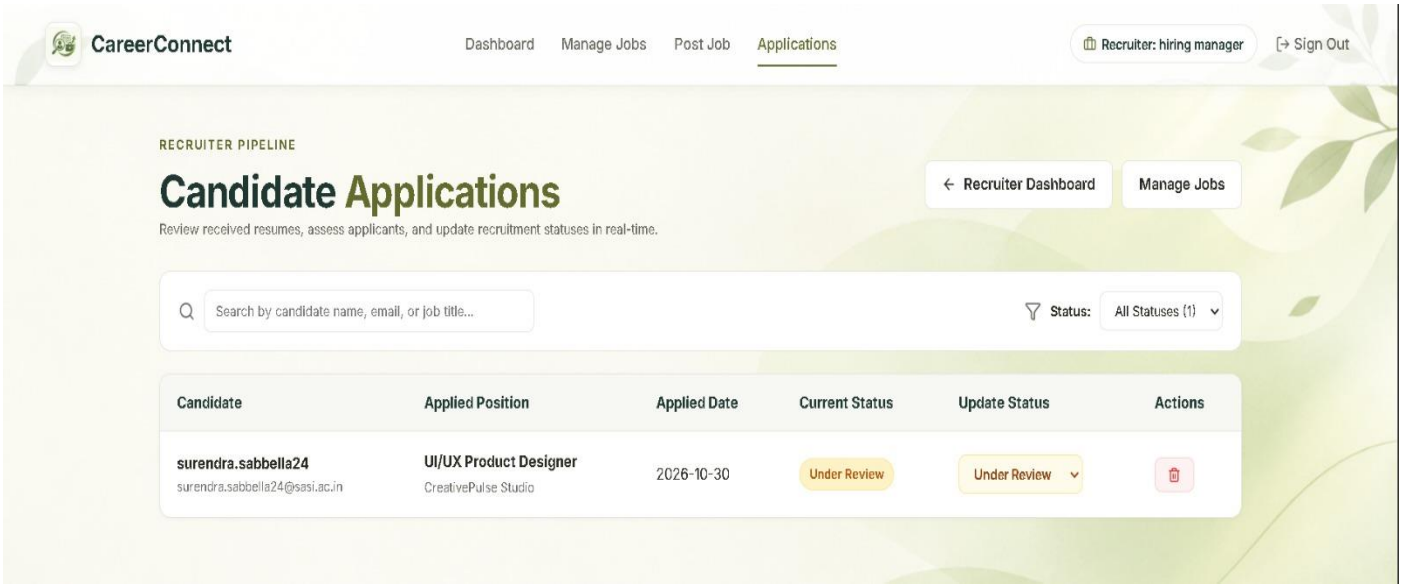

It contains fields such as Title, Company, Location, Job Type, Minimum Experience, Maximum Experience, Salary, Skills, and Description.

After entering the required information, the recruiter can click the Save Job button to save the job details. The Cancel button allows the recruiter to cancel the operation.

The same form is reused for both adding a new job and editing an existing job.

Main purpose: To manage job information and maintain updated job vacancies in the portal.

10. APPLICANTS PAGE

The Applicants Page displays candidates who have applied for a job, including their names, experience, resume links, and application status. Recruiters can review candidate details and update statuses to Applied, Shortlisted, or Rejected, helping manage the selection process.

CONCLUSION

The Job Recruitment Portal is designed to provide a simple and user-friendly platform for connecting candidates and recruiters. The project brings important recruitment activities together in a single web application.

Candidates can register, search for job opportunities, view job details, apply for suitable positions, and track their application status. Recruiters can add, edit, and delete job postings, view candidate applications, and update application statuses.

The project uses React JS to develop an interactive user interface, React Router for page navigation, and JSON Server for backend data management. Fetch API or Axios is used for communication between the frontend and backend. The application also uses reusable components to maintain an organized structure.

Through this project, we gain practical knowledge of React components, routing, API integration, CRUD operations, form handling, and data management. The project also demonstrates how different modules can work together to support the recruitment process.

Overall, the Job Recruitment Portal aims to make job searching and recruitment activities more convenient, efficient, and organized for both candidates and recruiters.
